

Title	ANUCLIM Annual Mean Rainfall raster layer
Alternative title(s)	cw_precipann_f
Abstract	<p>The Annual Mean Rainfall dataset was created using ANUCLIM software and the 1 second SRTM DEM-S (smoothed Digital Elevation Model) data. Climate variables generated by ANUCLIM (Version 6.1 MTHCLIM module) depend on a digital elevation model.</p> <p>Monthly mean climate values for the 1976-2005 periods are used to generate the surface. Grid resolution is 1 second or approximately 30m.</p> <p>https://data.gov.au/data/dataset/9a9284b6-eb45-4a13-97d0-91bf25f1187b</p>

Unique resource identifier	
Code	918ec618-d2b6-4d1d-abd1-e08a8bd6fb58
Presentation form	Model digital
Edition	1
Dataset language	English
Metadata standard	
Name	ISO 19115
Edition	2016
Dataset URI	https://datasets.seed.nsw.gov.au/dataset/918ec618-d2b6-4d1d-abd1-e08a8bd6fb58
Purpose	Modelling. Incorporated into BioNet Systematic Survey so that all existing and new systematic floristic survey sites are auto-populated with mean annual rainfall.
Status	Completed
Spatial representation type	grid

Spatial reference system

Code identifying
the spatial
reference system 4283

**Spatial
resolution** 30 m

**Additional
information
source** The real sensitivity of information in the climate surfaces used by ANUCLIM is such that a 1 km resolution DEM is normally sufficient for temperature dependent parameters and a 5 km resolution DEM is normally sufficient for rainfall dependent parameters (see Sharples et al. 2005). Choosing a DEM with 500 metres or finer can make the results visually appealing, but will not increase their real information content. A resolution of 1 km (or around 0.01 degrees) is normally sufficient for most ANUCLIM applications. Using a DEM with grid spacing finer than 100 metres is not recommended (see <http://fennergchool.anu.edu.au/files/anuclim61.pdf>).
