## Title Basin Technical Reports

## **Abstract**

The Basin Plan water quality technical reports are essential documents that provide an in-depth overview of water quality conditions in each water resource area within the Murray-Darling Basin. These reports include detailed analyses of water quality data, comparisons against established targets, and insights into the factors influencing water quality as required by Chapter 10, Section 10.30 of the Basin Plan. The information serves as a foundation for water quality management plans, to maintain or improve water quality in the Basin water resource plan area.

Note: If you would like to ask a question, make any suggestions, or tell us how you are using this dataset, please visit the <u>NSW Water Hub which has an online forum</u> you can join.
