

Title	Beni State Conservation Area vegetation map, 2013. VIS_Id 4353
Alternative title(s)	BeniSCA_2013_E_4353
Abstract	<p>A compilation of the vegetation data stored in the source feature dataset. Each estate has best available veg mapping as determined by PaCs Botanist, with Keith Formations and fire thresholds added. Estate includes NPWS acquired lands. To receive further updates contact individual NPWS Region STOs. All information is best available at time of production. Fields are</p> <p>Description: Vegetation type as described in feature class Code: code as described in feature class PCT: added where available (If ends in * more than one community may have been listed in report, only first community was added) NSW_Class: added where available (If ends in * more than one community may have been listed in report, only first community was added) NSW_Formation: added for all polygons FormationSourceID: links to FormationSourceLUT, outlines how formation was assigned and history of changes. Veg - long integer links Fire_Veg_Type_LUT which contains Min: minimum years btw burns Max: Maximum years between burns, Adv: 1= fire advantage and Regime Source. This code is dependent on region 1000-FWR 2000 - NPR 3000 -NTR 4000 - WRR, 9000 - Standardised classes Keith classes linking to regimes defined by Bradstock. Original_id: object id in source feature class source_id: Code relating to Vegetation sourceLUTdetailing origin of vegetation feature class, any changes made PWGRegion:domain with NPWG region PWGArea:domain with NPWG area EstateName: domain with NPWG estate name, also includes offpark Hectares - calculated using calculate geometry, GDA94 z55 Last updated August 2013, Version 5. Lineage	
Topology has been repaired cleaned and validated	
All features have been exploded	
Check Geometry and Repair Geometry tools run on all features	
NSW_class, PCT and NSW_ formations, were added where available see formation source field.	
Regimes were added for fire analysis see Fire_Veg_Type_LUT.	
This Version has been restructured to earlier versions checking has been undertaken through row counts, visual assessments using swiping through different mapped attributes.
