Title	Biolandscapes, South Western Slopes, Murray Extant. VIS_ID 4125
Alternative title(s)	SWS_MurrayBiolandscapes_E_4125
Abstract	The dataset shows the extant native vegetation as vegetation communities in relation to soil parent material, for an adjusted area of the NSW South Western Slopes (NSS) IBRA bioregion within the Murray, Murrumbidgee and Lachlan CMAs. VIS_ID 4125

Lineage	Lineage The dataset was created using a composite vegetation layer created for Part 4-6 of the report: "The Native Vegetation of the Southern Wheat-Sheep Belt", NSW Department of Environment and Climate Change, June 2007. See report for further disussion of the biolandscape concept.			
	The purpose of this is to delinear	was combined with data for geology/soil parent material. te disjunctions in vegetation assemblages as they occur in with boundaries defined by soil parent material. For Table 4 in the report Part 4.		
	For further information about the composite vegetation data, see also the metadata for the Murray and Murrumbidgee pre1750 and extant datasets, and the report parts 2-3. Further information is also available in the metadata statement: "Combined Vegetation Layer for Murrumbidgee Region", Wil Allen, 12 June 2007			
	The report for this data is: "Reco	e vegetation mapping layer provided by the Lachlan CMA. Instructed and Extant Distribution of Native Vegetation in Iment of Environment and Conservation, Information and Branch, Dubbo. May, 2006
