Title Clarence River Floodplain Prioritisation Study **Abstract** The Coastal Floodplain Prioritisation Study covered seven estuaries on the NSW floodplain. The study included an extensive data collection and collation process to improve understanding of the processes and areas that contribute to poor water quality and improve overall floodplain management. The data delivered here includes information on floodplain drainage infrastructure, soil stratigraphy and hydraulic conductivity, sea level rise vulnerability and drain cross sections. The final outcomes of the prioritisation for the Clarence River floodplain with respect to acid and blackwater generation is also provided. Resource locator Clarence River Name: Clarence River Floodplain Prioritisation Study **Floodplain** Protocol: WWW:DOWNLOAD-1.0-http--download **Prioritisation** Study Description: File contains: .shp, .mxd, .mpk, .pdf Function: download Name: Clarence River Floodplain Prioritisation Study Data Quality Statement Clarence River Floodplain Protocol: WWW:DOWNLOAD-1.0-http--download Prioritisation Study Data Description: Quality Data Quality Statement for the Clarence River Floodplain Prioritisation Study **Statement** Function: download Unique resource identifier Code e957c880-022a-4fbd-ad94-b828845b30e2 Presentation Map digital form Dataset **English** language Metadata standard Name ISO 19115 2016 Edition Dataset URI https://datasets.seed.nsw.gov.au/dataset/e957c880-022a-4fbd-ad94-b828845b30e2 The aims of the study were to develop and apply multi-criteria prioritisation Purpose methodologies to rank drainage subcatchments within NSW coastal floodplains by their contribution to acid and blackwater generation and discharge, to determine the subsequent risks to the estuarine waterways, and to guide the future management of coastal floodplains. The purpose of this prioritisation is to establish an evidence-based list of high priority subcatchments to be targeted for on-ground management actions or remediation. The Clarence River Floodplain Prioritisation Study was the application of the method on the Clarence River. Status Completed Spatial representation vector Type Spatial reference system
