

Title	Eastern Bushlands Database Central VIS_ID 181
Alternative title(s)	central_ebd_VISmap_181
Abstract	<p>The data set is a digital representation of the coarse vegetation cover in the eastern plains, eastern slopes and tablelands (generally the eastern division of NSW). The data has been visually interpreted from 1:100,000 geo-rectified Landsat TM images in 1991/92 and then converted to grid. Spatial and classification accuracy of the data is consistent and of acceptable quality. Three structural vegetation databases of the eastern portion of NSW from approximately the Western Slopes to the coast, for use as broadscale management tools. Vegetation visually interpreted from Landsat imagery. The original aim of the mapping was to produce a single layer, however different levels of detail between the datasets has precluded this. Recommended scale of use is 1:250,000.</p> <p>VIS_ID 181</p> <p>ANZLIG ANZNS0208000011</p> <p>VISID 181</p>

Unique resource identifier	
Code	1440cb3f-799e-4034-9562-046b3336494e
Presentation form	Map digital
Edition	unknown
Dataset language	English
Metadata standard	
Name	ISO 19115
Edition	2016
Dataset URI	https://datasets.seed.nsw.gov.au/dataset/1440cb3f-799e-4034-9562-046b3336494e
Purpose	Vegetation Mapping
Status	Completed
Spatial representation	
Type	vector

Geometric Object Type	curve
Geometric Object Count	1
Spatial reference system	
Code identifying the spatial reference system	4283
Equivalent scale	1:None
Topic category	

Keyword set	
keyword value	Environment and Conservation
Originating controlled vocabulary	
Title	ANZLIC Search Words
Reference date	2008-05-16
Geographic location	
West bounding longitude	147.269107
East bounding longitude	151.803458
North bounding latitude	-34.776558
South bounding latitude	-31.625325
Vertical extent information	
Minimum value	-100
Maximum value	2228
Coordinate reference system	
Authority code	urn:ogc:def:cs:EPSG::
Code identifying the coordinate reference system	5711
Temporal extent	
Begin position	1990-01-01
End position	N/A
Dataset reference date

Lineage	Data was captured as part of the Save the Bush funded Eastern Bushlands Database project. Linework derived by visual interpretation of hardcopy Landsat TM imagery printed at 1:100 000. Polygon's attributed by combination of visual interpretation and low intensity field work. Three separate datasets are similar but inadequate in enabling combination. Digitised in ERMS. Data then transferred into ARC/INFO. Three datasets stored and managed separately. These three datasets then converted to 100 metre cell grids and merged together with their individual attributes of Description and Vegtype maintained. This whole datasets then clipped to an area 100km West and 10 km East of coastline.
Limitations on public access	
Scope	dataset
DQ Completeness Commission	
Effective date	2009-01-10
Explanation	The dataset consists of three complete portions covering eastern NSW - Northern, Southern and Central. Classification at the species level was not possible due to the limitations of Landsat TM imagery interpretation. Therefore only community groups were labelled.
DQ Completeness Omission	
Effective date	2009-01-10
DQ Conceptual Consistency	
Explanation	The dataset has ARC/INFO polygon topology, all polygons are labelled. All spatial data has been checked visually and by available GIS package functions.
DQ Topological Consistency	
Explanation	Checked for missing attributes All attributes were checked
DQ Absolute External Positional Accuracy	
Explanation	Data should not be used at scales finer than 1:250 000. No formal accuracy assessment has been carried out. See following NPWS reports for details of methodology: Holme, L. (1993). Eastern Bushlands Database Project (Central Region). NSW NPWS internal unpublished document and Roberts, G. (1992). Vegetation systems of North East New South Wales: Mapped from Landsat TM imagery. NSW National Parks and Wildlife Service NEP 91 298.
DQ Non Quantitative Attribute Correctness	
Explanation	No formal accuracy assessment has been carried out. See above NPWS reports. Attributes represent coarse vegetation types, grouped according to dominant species.
