

Title	Eastern Bushlands Database VIS_ID 518
Alternative title(s)	north_ebd_VISmap_518
Abstract	<p>"Eastern Bushlands Database - Northern Region. Roberts, G. (1992). Vegetation systems of north east New South Wales: Mapped from Landsat TM imagery. NSW National Parks and Wildlife Service NEP 91 298. Broadscale Structural Vegetation mapping covering the eastern portion of NSW. The EBDB provides a broadscale management tool for conservation planning and decision making for purposes including stratifying field survey effort, regional planning, baseline estimation of clearing or regrowth rates, and as input to state-wide forest cover datasets.</p> <p>Data was captured as part of the Save the Bush funded Eastern Bushlands Database project. The dataset consists of three complete portions covering eastern NSW - Northern, Southern and Central. The three separate datasets are similar but not enough to enable combining of them. Data should not be used at scales finer than 1:250 000.</p> <p>Mapped using visual interpretation of Landsat TM satellite imagery. Attribute mapping includes structural vegetation information. Linework derived by visual interpretation of hardcopy Landsat TM imagery printed at 1:100 000. Polygons attributed by combination of visual interpretation and low intensity field work. Higher level of detail mapped in the Central Region, with a total of 53,592 polygons mapped (23,099 ,10 ha) as compared to the Southern Region (13,400 polygons mapped, 1,822 ,10 ha) and the Northern region (36,204 polygons mapped, 9,916 ,10 ha)."</p> <p>VIS_ID 518</p>

Lineage	The linework was visually interpreted onto plastic overlays from level 05 Landsat TM quarter scenes printed at a scale of 1:100 000, dating from 1989-1991. The visually interpreted data was then manually digitised off the plastic overlays using the DOS version of the Environmental Resource Mapping System (E-RMS).
