| <b>Purpose</b>   | (1) This Policy aims to protect and enhance the land to which this Policy applies employment purposes.(2) The particular aims of this Policy are as follows:(a) to promote economic development and the creation of employment by providing for development including major warehousing, distribution, freight transport, industrial, high technology and research facilities,(b) to provide for the co-ordinated planning and development of land ,(c) to rezone land for employment or environmental conservation purposes,(d) to improve certainty and regulatory efficiency by providing a consistent planning regime for future development and infrastructure provision,(e) to ensure that development occurs in a logical, environmentally sensitive and cost- |

effective manner and only after a development control plan (including specific development controls) has been prepared for the land concerned,(f) to conserve and rehabilitate areas that have a high biodiversity or heritage or cultural value, in particular areas of remnant vegetation.

## Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website ([www.legislation.nsw.gov.au](http://www.legislation.nsw.gov.au)). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
