

Title	Environmental Planning Instrument - Strategic Agricultural Land
Alternative title(s)	EPI - Strategic Agricultural Land
Abstract	The spatial data represents the strategic agricultural land for Environmental Planning Instrument.
Resource locator

Unique resource identifier	
Code	828111a7-1377-4e80-b10c-2359e633dd2e
Presentation form	Map digital
Edition	1
Dataset language	English
Metadata standard	
Name	ISO 19115
Edition	2016
Dataset URI	https://datasets.seed.nsw.gov.au/dataset/828111a7-1377-4e80-b10c-2359e633dd2e
Purpose	(i) to recognise the importance of agricultural resources, and (ii) to ensure protection of strategic agricultural land and water resources, and (iii) to ensure a balanced use of land by potentially competing industries.
Status	Completed
Spatial representation	

Type	vector
Geometric Object Type	surface

Spatial reference system

Code identifying the spatial reference system	4283

Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website (www.legislation.nsw.gov.au). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
