<b>Name</b>	ISO 19115
<b>Edition</b>	2016
<b>Dataset URI</b>	<a href="https://datasets.seed.nsw.gov.au/dataset/151a5f28-75c8-4db6-8dc3-d93db16bacd3">https://datasets.seed.nsw.gov.au/dataset/151a5f28-75c8-4db6-8dc3-d93db16bacd3</a>
<b>Purpose</b>	The aims of this EPI are as follows:(a) to identify and facilitate the orderly and economic use and development of additional village rural lands for rural and related purposes,(b) to identify the Rural village Planning Principles and the Rural Subdivision Principles so as to assist in the proper management, development and protection of rural village lands for the purpose of promoting the social, economic and environmental welfare of the State,(c) to implement measures designed to reduce land use conflicts,(d) to identify agricultural land for the purpose of ensuring the ongoing viability of agriculture on that land, having regard to social, economic and environmental considerations,(e) to amend provisions of other environmental planning

instruments relating to concessional lots in rural subdivisions.

## Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website ([www.legislation.nsw.gov.au](http://www.legislation.nsw.gov.au)). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
