

Title	Estuary Catchment Total Suspended Solids Loads
Abstract	Annual average loads of Total Suspended Solids have been estimated for all 184 NSW coastal catchments. Land use in each catchment was assigned to one of nine categories and event mean concentrations of TSS for each land use determined from literature review and field studies. Flow was estimated using a modified version of the 2CSalt catchment rainfall-runoff model. Using these two inputs, loads under current land use and hypothetical natural land use were derived.

Purpose	This estuary dataset was developed under a new Monitoring, Evaluation and Reporting (MER) Program initiated by the NSW Government in 2007 to assess and better manage the health of natural resources across the State. The MER Program is in response to the NSW Natural Resources MER Strategy which has the objective of providing appropriate information for decision-making by natural resource managers.
