**Lineage** Dr John T. Hunter prepared this report of the vegetation of the Euroka NCT property. Aims included the collation of existing information from previous floristic surveys and that the survey of two to four, 20 x 20 m stratified full vascular plant floristic sites is carried out in order to complete a comprehensive investigation of the vegetation and flora of Euroka. The report represents the findings of this study. The collated information is to be used as a guide for management purposes.

The requirements of the investigation were: 1. Ecosystem typing: identification of ecosystem types in accordance with DECC Nandewar Vegetation Communities or Benson. 2. Distribution - brief description of where each ecosystem occurs on the property. 3. Dominant canopy species, mid-storey, understorey and ground layer. 4. Condition - previous disturbance, approximate age classes, presence of hollow trees. 5. Weeds - species, general distribution and abundance on site. 6. Mapping of any Howell Shrublands and other EECs as shape files or sketch maps. 7. Indicative species list. 8. Threatened species search. 9. Management recommendations
