

Title	Ground Cover Trend [dig stage]
Abstract	A 5 band output image showing the trend in ground cover from regression analysis of the specified image timeseries. ; ; Image layers are: ; band 1 the regression slope; band 2 upper slope confidence interval; band 3 lower slope confidence interval, band 4 intercept and band 5 number of observations from a virtual raster timeseries of images. ; ; The slope is scaled to an annual measure. The slopes and intercepts are converted from bare ground, to ground cover, as the analysis was completed on the die images.; ; The input timeseries images are bare fractional cover images (stage die) masked for water, cloud and cloud shadow. ; ; No data = zero in all bands; ; Produced for Lower Murray Darling CMA.; ; Image is 32 bit floating point
