

Title	Wetlands Project-Hypothesis 7-Namoi
Abstract	<p>The survey documents the presence/absence of macroinvertebrate species from selected wetlands in the Namoi catchment: Integrated Monitoring of Environmental Flows (IMEF) Wetland replenishment in Namoi Wetlands. Stage 1 macroinvertebrate data 1999-2004</p> <p>The Integrated Monitoring of Environmental Flows Project (IMEF) is a NSW wide scientific program established in 1998. IMEF provides ecological monitoring in relation to environmental flow rules. This in turn improves our knowledge of biodiversity and ecosystem processes in rivers and wetlands. The aim of this project is to establish relationships between wetland water regimes (flooding and drying cycles) and the diversity and abundance of wetland plants.</p> <p>This dataset specifically pertains to the Namoi Catchment.</p> <hr/> <p>Note: If you would like to ask a question, make any suggestions, or tell us how you are using this dataset, please visit the NSW Water Hub which has an online forum you can join.</p>
