	Function: download	
NSW Beach Profile Database	Name: NSW Beach Profile Database	
Frome Database	Protocol: WWW:DOWNLOAD-1.0-httpdownload	
	Description:	
	The NSW Beach Profile Database collates and presents aerial survey data of NSW dating back to the 1930's. The aim of the database is to make long-term beach data easily accessible to support coastal management and promote better public understanding of coastal processes and change. The NSW Beach Profile Database is available for everyone to use, and is designed to promote use for all knowledge levels. It is likely that the users of this site will come from local and state government and consultant, as well as coastal community members and educators.	
	Use and presentation of the data obtained from this site on all occasions must include an acknowledgement to OEH as the owner of the Data and must explicitly identify the following webpage as its source: wwww.nswbpd.wrl.unsw.edu.au. Read the data disclaimer for more information on the conditions of use.

Lineage

The NSW Beach Profile Database collates and presents aerial survey data of NSW dating back to the 1920's. Most of the data you are accessing on this site has been processed using photogrammetric techniques, to give points along selected profiles along the NSW Coast. Along the profile lines, the photogrammetrist has chosen the points where the slope of the surface has changed. Typically, there is 10 - 20 points per profile at any given survey date. In some instances data have also been sourced from ground survey or Airborne LiDAR (Light Detection and Ranging) survey.
