

<b>Title</b>	Joint Vegetation Mapping Project: Brigalow Belt South Bioregion, Extant Vegetation model VIS_ID 1649
<b>Alternative title(s)</b>	BRIGALOWBELTSTH_COMP_E_1649
<b>Abstract</b>	The JVMP produced an extant vegetation model, presented in mapped form, for the BBS bioregion. The map shows the modelled distribution of extant vegetation, identified through aerial photography and satellite image interpretation. The extant vegetation model was restricted to the extant woody vegetation with an approximate crown canopy projection of greater than 10% and identified open woodland / grassland vegetation groups. The extant vegetation model was designed as a tool suitable for landscape level planning at a bioregional scale. VIS_ID 1649

<b>Lineage</b>	Floristic survey sites were initially grouped into vegetation groups using numerical classification. The distributions of these groups were then modelled and extrapolated in relation to a set of mapped environmental variables.
