

Title	Joint Vegetation Mapping Project: Brigalow Belt South Bioregion, Predicted Potential Vegetation model VIS_ID 1650
Alternative title(s)	BRIGALOWBELTSTH_COMP_P_1650
Abstract	The JVMP has produced a "predicted potential vegetation distribution model" that showed the potential for a particular vegetation group, expressed as a probability, to occur in a given environment. The potential distribution is dependant on the current extant distribution, as defined by the sampling regime, and the relationships such vegetation groups have with the suite of environmental factors utilised by the model. The predicted potential vegetation; distribution model was designed as a tool suitable for landscape level planning at a bioregional scale. This product has substantial utility in land repair and revegetation projects and is designed as a tool for looking forward rather than backwards. VIS_ID 1650

Unique resource identifier	
Code	52fed17a-5652-487d-ae9f-a7a47a3df834
Presentation form	Map digital
Edition	unknown
Dataset language	English
Metadata standard	
Name	ISO 19115
Edition	2016
Dataset URI	https://datasets.seed.nsw.gov.au/dataset/52fed17a-5652-487d-ae9f-a7a47a3df834
Purpose	This modelled vegetation product was developed for the Resource and Conservation Assessment Council (RACAC)for use in the NSW Brigalow Belt South Western Regional Assessment.
Status	Completed
Spatial representation type	grid
Spatial reference system	

Code identifying the spatial reference system	4283
Spatial resolution	100 m
Additional information source	Lezaich,P. (2003). Joint Vegetation Mapping Project. Brigalow Belt South Bioregion. A project undertaken for; the Resource and Conservation Assessment Council NSW Western Regional Assessments. Project number WRA 24

Lineage	Floristic survey sites were initially grouped into vegetation groups using numerical classification. The distributions of these groups were then modelled and extrapolated in relation to a set of mapped environmental variables.
