

Title	Land Systems of Western New South Wales
Alternative title(s)	SCS Tecnical Report No. 25
Abstract	<p>Land systems are areas or groups of areas throughout which there is a recurring pattern of topography, soils and vegetation. This vector dataset with accompanying hardcopy report describe 251 land systems for Western New South Wales. They provide soil and land resource information suitable to assist in broad scale land-use planning and land management. Land systems were mapped at a scale of 1: 250,000 scale.</p> <p>Related Datasets: The dataset area is also covered by the mapping of the Reconnaissance Soil and Land Resources of the Murray Catchment and Hydrogeological landscapes of NSW.</p> <p>Online Maps: This and related datasets can be viewed using eSPADE (NSW's soil spatial viewer), which contains a suite of soil and landscape information including soil profile data. Many of these datasets have hot-linked soil reports. An alternative viewer is the SEED Map; an ideal way to see what other natural resources datasets (e.g. vegetation) are available for this map area.</p> <p>Reference: Walker PJ, 1991, Land System of Western NSW, Technical Report No. 25, Soil Conservation Service of NSW, Sydney.</p>

Unique resource identifier

Code 9ad1bb9c-82a1-4b9a-82b4-dbb1e77ac014

Presentation form Map digital

Edition 2.0

Dataset language English

Metadata standard

Name ISO 19115

Edition 2016

Dataset URI <https://datasets.seed.nsw.gov.au/dataset/9ad1bb9c-82a1-4b9a-82b4-dbb1e77ac014>

Purpose A collation of the Soil Conservation Service's Land System mapping in Western NSW for rangeland management.

Status Completed

Spatial representation

Type vector

Geometric Object Type curve

Geometric Object Count 252

Spatial reference system

Code identifying the spatial reference system 4283

Equivalent scale 1:None

Additional information source The dataset should be cited as:Walker PJ 1991, Land Systems of Western New South Wales. Soil Conservation Service of New South Wales, Technical Report No.25. Available Format Types and Access: Vector data provided in shapefile format; Report and maps are in PDF format. The shapefile and report is available for download from OEH Open Data Portal (<http://data.environment.nsw.gov.au/>) and viewable on the eSPADE spatial viewer (<http://espade.environment.nsw.gov.au>). Individual map unit reports can also be downloaded on eSPADE. Hard copy 1:250,000 maps and report were published but are now out of print and not available.

Lineage	<p>Land System polygons were originally mapped on hardcopy ortho photomaps. These were combined with ground traverses for field sampling and unit descriptions. Ortho photomap polygons were manually transferred to 1:250,000 base maps and published as individual map products to augment the report. Land Systems of Western NSW Published 1: 250,000 map tiles were digitised and tagged using GENAMAP GIS software then subsequently merged into a seamless coverage. Prior to recent updates this merged dataset only included mapping within the Western Division extent. This latest vector dataset now includes: * All digitized 1:250 000 Land System maps merged as a seamless layer.* Accurate Lachlan and Barwon River boundaries along the southern and north eastern map edges, *</p> <p>The inclusion of a few polygons missing from the earlier merged Land System dataset.</p>
Limitations on public access	

Scope	dataset
DQ Completeness Commission	
Effective date	2011-08-04
Explanation	All polygons in the GIS layer are labelled with a code, name and other land system fields.
DQ Conceptual Consistency	
Effective date	1900-01-01
DQ Topological Consistency	
Effective date	2011-08-04
Explanation	ArcGIS was used to ensure all polygons in the shape file are topologically correct. All polygons have a unique identifier.
DQ Absolute External Positional Accuracy	
Effective date	2011-08-04
Explanation	Polygons are generally accurate to plus or minus 250 metres. In some areas, land system boundaries many also have a rectification error that occurred during the initial digitizing.
DQ Non Quantitative Attribute Correctness	
Effective date	2011-08-04
Explanation	Attributes are accurate.
