

Title	Native Title Determination Outcomes
Abstract	<p>Determination area showing categorisation of the existence or otherwise of native title for portions of the area. The native title outcomes depicted include: Native Title exists (exclusive), Native Title exists (non-exclusive), Native Title does not exist and Native Title extinguished. The areas shown according to this classification are based on the best information available to the Tribunal at the date of determination, and should be considered indicative only. The Tribunal is not able to map all native title outcome areas included in determinations.</p>

Function: download

[WFS - Native Title Determination Outcomes](#)

Name: WFS - Native Title Determination Outcomes

Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

Web Feature Service (WFS) provides an interface that allows requests for geographical features across the web using platform independent calls. (NSW Government - Spatial Web Services Register June 2015). WFS allows a user to spatially analyse the features within a dataset. This service is aimed at advanced geographical information users, and will require access to geographical information system (GIS) software such as QGIS and ArcGIS/ArcMap.

Function: download

[ArcGIS REST SERVICE - Native Title Determination Outcomes](#)

Name: ArcGIS REST SERVICE - Native Title Determination Outcomes

Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

An ArcGIS Server web service represents a GIS resource—such as a map, locator, or image—that is located on an ArcGIS Server site and is made available to client applications. Depending on the layers enabled, this web service allows a user to query its features and/or visualise the dataset. This service is aimed at advanced geographical information users, and will require access to geographical information system (GIS) software such as ArcGIS/ArcMap.
