

Title	Native Woody Vegetation Mapping of the NSW Wheat-belt VIS_ID 1607
Alternative title(s)	nyngan98_wheatbelt_VISmap_1607
Abstract	<p>Previously mapped and described remnant native woody vegetation of the wheat-belt is updated using Landsat TM false colour composite (bands 2,4,5,-green, near infra red, mid infra red) 1:250 000 Landsat images from a various dates, paths and rows to delineate areas where clearing of native vegetation has occurred. The study area extends from the Western Division boundary to the 300m contour west of the Great Dividing Range and between Latitudes 29° 00' S and 34° 00' S. Stand alone dataset.</p> <p>VIS_ID 1607</p> <p>ANZNS0208000148</p>

Unique resource identifier	
Code	7ec041bc-ff7c-452a-ae36-b651c0c6437f
Presentation form	Map digital
Edition	unknown
Dataset language	English
Metadata standard	
Name	ISO 19115
Edition	2016
Dataset URI	https://datasets.seed.nsw.gov.au/dataset/7ec041bc-ff7c-452a-ae36-b651c0c6437f
Purpose	Vegetation Mapping
Status	Completed
Spatial representation	
Type	vector
Geometric Object Type	curve
Geometric	1

Object Count	
Spatial reference system	
Code identifying the spatial reference system	4283
Equivalent scale	1:None
Topic category	

Keyword set	
keyword value	Environment and Conservation
Originating controlled vocabulary	
Title	ANZLIC Search Words
Reference date	2008-05-16
Geographic location	
West bounding longitude	147.001192
East bounding longitude	148.501177
North bounding latitude	-31.99851
South bounding latitude	-30.998428
Vertical extent information	
Minimum value	-100
Maximum value	2228
Coordinate reference system	
Authority code	urn:ogc:def:cs:EPSG::
Code identifying the coordinate reference system	5711
Temporal extent	
Begin position	1998-03-01
End position	N/A
Dataset reference date

Lineage	Interpretation of various scales (1:50,000,1:80,000,1:85,000) of aerial photography used to define boundaries of native woody vegetation. Boundaries then transferred to 1:100 000 scale maps and digitised using Environmental Resource Mapping System E-RMS. Landsat 1:250,000 satellite images used to define the boundaries of areas cleared of native woody vegetation which were transferred to then digitised from 1:250,000 maps using E-RMS and ArcInfo.

Limitations on public access	
Scope	dataset
DQ Completeness Commission	
Effective date	2009-10-01
Explanation	The dataset complete with reference to range and field verification. Native vegetation defined as Greater than 5 percent crown cover. Where cover less than 5 percent, remnants were visited in the field before mapping.
DQ Completeness Omission	
Effective date	2009-10-01
Explanation	Where cover less than 5 percent, remnants were visited in the field before mapping. Treeless remnants only mapped where observed in the field. Remnants less than 10Ha were not mapped. Limited ground truthing possible as much of the vegetation has been cleared, remnants correlated with existing digital data.
DQ Conceptual Consistency	
Explanation	Consistent with cultural (roads) and physical (rivers and dams) attributes at the 1:100 000 map scale.
DQ Topological Consistency	
Explanation	Checked for missing attributes The GIS package ERMS was used to do a topological consistency check to ensure all polygons are closed, nodes are formed at intersection of lines, all polygons are labelled once and there are no duplications. After capture, the coverage was checked against original air photomapping and errors corrected.
DQ Absolute External Positional Accuracy	
Explanation	Very high degree of accuracy at the 1:250 000 scale. Based on extensive ground truthing at the 1:100 000 scale, objective classification using PATN on 1200 sites and Air photo interpretation.
