

Title	Western Regional Water Strategy connectivity modelling
Abstract	<p>Modelling that was used to inform the development of the connectivity actions in the Western Regional Water Strategy.</p> <p>Modelling base case provides the diversions under current conditions (Water Sharing Plan rules). The base case provides daily flows and diversions for the period 1895 to 2020 for the Barwon-Darling and the following regulated tributary valleys</p> <ul style="list-style-type: none"> <li>• NSW Border Rivers</li> <li>• Gwydir</li> <li>• Namoi</li> <li>• Macquarie</li> </ul> <p>Preliminary modelling analysis (bookend analysis) done for the Western Regional Water Strategy to understand the upper limit of possible connectivity benefits from imposing water restrictions in the Barwon-Darling and upstream regulated tributary rivers. This modelling assessed the change in daily flows from restricting all supplementary access in the tributary valleys, as well as Class A, B and C access in the Barwon-Darling.</p> <hr/> <p>Note: If you would like to ask a question, make any suggestions, or tell us how you are using this dataset, please visit the <a href="#">NSW Water Hub which has an online forum</a> you can join.</p>
