

Abstract

Overview

The NSW Ecosystem Offset Trading Group Map is a regional scale map of candidate **non-threatened** Ecosystem Offset Trading Groups as defined under the NSW Biodiversity Offset Scheme.

The map covers all of NSW. Areas designated as 'No Offset Trading Group' are areas within NSW that are currently considered ineligible for Biodiversity Stewardship Agreements. The mapped Offset Trading Groups are generated by a direct translation of the NSW State Vegetation Type Map (SVTM vC1.1.M1.1) according to the [Biodiversity Assessment Method](#) Table 5.

This map is updated periodically in response to updates to the NSW State Vegetation Type Map or other relevant information.

Key Fields:

- !OFFSET_TRA! - Offset Trading Group
- !SUB_NAME_7! - Sub IBRA Bioregion
- !OTGSUBIBRA! - A concatenation of the Offset Trading Group and the Sub IBRA Bioregion

Current Version 0.5**Limitations on Use**

- The map may be used as a guide to the occurrence and distribution of NSW Ecosystem Offset Trading Groups.
- The map is derived from regional scale mapping of Plant Community Types and should not be used for local or property scale decisions.
- The map does not include Offset Trading Groups for threatened ecological community (TEC) Ecosystem credit types.

Data Access

Map data may be downloaded as a zipped Geotiff file at the link below. The map may also be viewed on the SEED Map Viewer, or accessed via the underlying ArcGIS REST Services or WMS for integration in GIS or business applications.

Map Data Type

The map is supplied as a 5m GeoTiff Raster, and can be viewed and analysed in most commercial and open-source spatial software packages. No preferred symbology is provided.

Feedback and Support

We welcome your feedback to assist us in continuously improving our products. To help us track and process your feedback, please use the SEED Data Feedback tool available via the SEED map viewer.

Description:

An ArcGIS Server web service represents a GIS resource such as a map, locator, or image that is located on an ArcGIS Server site and is made available to client applications. Depending on the layers enabled, this web service allows a user to query its features and/or visualise the dataset. This service is aimed at advanced geographical information users, and will require access to geographical information system (GIS) software such as ArcGIS/ArcMap.
