Title

Abstract

NSW Imagery Date Web Service

The NSW Imagery date web service provides access to a repository of the footprint Spatial Services (DCS) standard imagery covering NSW, plus additional sourced imagery. It contains the footprint of LANDSAT® satellite imagery, standard 50cm orthorectified imageries, High resolution 10cm Town Imageries. It also contains the footprint of high resolution imageries within multiple areas of NSW within Spatial Services (DCS) maintained projects and captured by AAM and Jacobs (previously SKM). This web service is updated periodically when new imageries are available. The imageries are shown progressively from scales larger than 1:150,000 higher resolution imagery overlays lower resolution imagery and most recent imagery overlays older imagery within each resolution. The footprint provides an approximate imagery capture date and an extent for all the image categories. The service is available in a cached environment only. This dataset is compliant with the NSW FSDF and its specifications.

NOTE: Please contact the Customer HUB https://customerhub.spatial.nsw.gov.au/ for advice on datasets access.

Description:

The following link will redirect you to an external page outside of SEED to access the resource. This could be another page or another portal.

Function: download

PDF Data Quality Statement - NSW Imagery Date Web Service Name: PDF Data Quality Statement - NSW Imagery Date Web Service

Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

The Data Quality Statement is for users to understand how a particular dataset could be used and whether it can be compared with other, similar datasets. It provides a description of the characteristics of the data to help the user decide whether the data will be fit for their specific purpose (ICT Strategy, NSW Government accessed 23rd May 2016). The Data Quality Statement is provided in an XML format to be utilised by other applications

Function: download

WMS - NSW Imagery Date Name: WMS - NSW Imagery Date

Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

Web Map Service (WMS) is a standard protocol for serving georeferenced map images over the internet that are generated by a map server using data from a GIS Database (NSW Government - Spatial Web Services Register June 2015). WMS allows a user to spatially visualise the dataset, but not query its features. This service is aimed at advanced geographical information users, and will require access to geographical information system (GIS) software such as QGIS and ArcGIS/ArcMap.

Function: download

ArcGIS REST Name: ArcGIS REST SERVICE - NSW Imagery Date

SERVICE - NSW Imagery Date Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

An ArcGIS Server web service represents a GIS resource—such as a map, locator, or image—that is located on an ArcGIS Server site and is made available to client applications. Depending on the layers enabled, this web service allows a user to query its features and/or visualise the dataset. This service is aimed at advanced geographical information users, and will require access to geographical information system (GIS) software such as ArcGIS/ArcMap.
