Title NSW Priority Oyster Aquaculture Areas

Abstract

Oyster aquaculture areas are areas of NSW estuaries assessed for edible oyster aquaculture. These areas were categorised by assessment of all current, former and potential leases in relation to their location, environmental and socio-economic criteria and within the boundaries developed in co-operation with all relevant State government agencies, neighboring communities and the oyster industry. The areas are categorized as priority oyster aquaculture areas, terminating current lease area, current leases within the national parks estate and lease area under Merimbula Airport jurisdiction

Description:

<u>Oyster</u> <u>Aquaculture</u> Areas

The Data Quality Statement is for users to understand how a particular dataset could be used and whether it can be compared with other, similar datasets. It provides a description of the characteristics of the data to help the user decide whether the data will be fit for their specific purpose (ICT Strategy, NSW Government accessed 23rd May

2016)

WMS - NSW **Priority Oyster Aquaculture Areas**

Name: WMS - NSW Priority Oyster Aquaculture Areas

Protocol: WWW:DOWNLOAD-1.0-http--download

Description:

Web Map Service (WMS) is a standard protocol for serving georeferenced map images over the internet that are generated by a map server using data from a GIS Database (NSW Government - Spatial Web Services Register June 2015).

WMS allows a user to spatially visualise the dataset, but not query its features.

This service is aimed at advanced geographical information users, and will require access to geographical information system (GIS) software such as QGIS and

ArcGIS/ArcMap. Function: download Name: ArcGIS REST SERVICE - NSW Priority Oyster Aquaculture Areas **ArcGIS REST SERVICE - NSW** Protocol: WWW:DOWNLOAD-1.0-http--download **Priority Oyster Aquaculture** Description: **Areas** An ArcGIS Server web service represents a GIS resource—such as a map, locator, or image—that is located on an ArcGIS Server site and is made available to client applications. Depending on the layers enabled, this web service allows a user to query its features and/or visualise the dataset. This service is aimed at advanced geographical information users, and will require access to geographical information system (GIS) software such as ArcGIS/ArcMap.
