

Title	NSW Water Dashboards-Tracking Groundwater Extraction
Abstract	<p>Tracking groundwater extraction against extraction limits: How extractions are tracking against extraction limits in inland groundwater sources.</p> <p>How and why we track groundwater extraction: The amount of groundwater that can be extracted from a groundwater source is limited. While the amount extracted by all water users varies each year, on average it cannot exceed the extraction limits (i.e. the long-term average annual extraction limit or the Sustainable Diversion Limit).</p> <p>Before July each year, the department assesses if average extraction over the previous five years has exceeded the long-term average annual extraction limit plus a buffer (called the compliance trigger).</p> <p>For each inland groundwater source, the dashboard shows for the current water year:</p> <ul style="list-style-type: none"> • volume that if extracted will reach the compliance trigger (in ML, calculated annually) • volume remaining to be extracted before reaching the compliance trigger (in ML, calculated throughout the year) • the likelihood that access to groundwater may be reduced in the next water year.
