<b>Purpose</b>	Data developed for landuse planning purposes.
<b>Status</b>	Completed
<b>Spatial representation</b>	
<b>Type</b>	vector
<b>Spatial reference system</b>	
<b>Code identifying the spatial reference system</b>	4283

Equivalent scale	1:None
Additional information source	<p>Key AttributeVEGTYPEGrassy Box Gum Woodland[Grassy Box Gum Woodland occurs on soils that have resulted from volcanic activity, on deep colluvial soils, and exposed and eroded granite. White Box (<i>Eucalyptus albens</i>), Yellow Box (<i>E. melliodora</i>) and Blakely's Red Gum (<i>E. blakelyi</i>) are the dominant trees. The understorey is chiefly grassy and would have once supported a high diversity of forbs with Kangaroo Grass (<i>Themeda australis</i>) and Poa Tussock (<i>Poa sieberiana</i>) being the dominant grass species]Open Forest / Woodland[Open forest/woodland occurs on the metamorphic/metasediment ridges to the west and north of Albury city. These open forests are dominated by White Box, Yellow Box, Blakely's Red Gum, Red Stringybark (<i>E. macrorhyncha</i>), Red Box (<i>E. polyanthemos</i>) and Long-leaved Box (<i>E. goniocalyx</i>). The understorey is generally in excellent condition and contains a high diversity of forbs, grasses and shrubs. It includes large populations of many woodland understorey plants that are now relatively rare on the south-west slopes, including over 46 species of orchids, Milkmaids (<i>Burchardia umbellata</i>), Twining Fringe Lily (<i>Thysanotus tuberosus</i>), Yam Daisy (<i>Microseris lanceolata</i>) and Blue Pincushion (<i>Brunonia australis</i>).]River Red Gum Forest[River Red Gum (<i>Eucalyptus camaldulensis</i>) Forest occurs on the floodplain of the Murray River and along the major creek tributaries. The understorey is generally highly degraded by past agricultural practices and weed invasion. Shrubs or small trees present include Silver Wattle (<i>Acacia dealbata</i>), Red-stem Wattle (<i>Acacia rubida</i>) and Sweet Bursaria (<i>Bursaria spinosa</i>).]</p>
