

Title	RAW Water Quality Data								
Abstract	<p>The RAW Water Quality Data is collected under The State Water Quality Assessment and Monitoring Project (SWAMP). The State Water Quality Assessment and Monitoring Project (SWAMP) is a state wide project responsible for collecting, analysing and reporting the ambient water quality condition of rivers in NSW.</p> <p>SWAMP collects water quality data monthly to:</p> <ul style="list-style-type: none"> • assess ambient river water quality in terms of electrical conductivity, temperature, turbidity, total suspended solids, pH, dissolved oxygen, phosphorus and nitrogen at selected sites across NSW • provide high quality, long term, statistically robust data to enable condition and trend reporting • provide data to enable measures of compliance with state and national guidelines and standards, and • provide a framework of river water quality monitoring across NSW upon which other programs can build. <p>This data is then used for: - Basin Technical Reports - Matter 12 Reports - River Condition Index - Water Quality Index</p> <hr/> <p>Note: If you would like to ask a question, make any suggestions, or tell us how you are using this dataset, please visit the NSW Water Hub which has an online forum you can join.</p>
