Title	Remnant Vegetation of the western Cumberland subregion, 2013 Update. VIS_ID 4207	
Alternative title(s)	CumberlandPlainWest_2013_E_4207	
Abstract	A 2013 update to the western parts of the Remnant Vegetation of the Cumberland Plain GIS data layers (VIS_IDs 2221, 2222 and 3785) using 2011 and 2012 imagery. Update focused on removing large areas of clearing at 1:10,000-1:15,000 scale. Those areas within the Sydney Metro CMA boundary, which were covered by the Sydney Metro Veg V2 2013 vegetaion map (VIS_ID 3817), were not updated. Update was conducted for use in the Biodiversity Investment Opportunities (BIO) Map, part of the Linking Landscapes through Local Action project funded by the Green Corridors Program.	
	Please note:	
	<ul> <li>The previous update completed by the Scientific Committee and Simpson 2008(VIS_ID 3785) was integrated into this update;</li> </ul>	
	<ul> <li>The update was conducted at approximately 1:10,000-1:15,000;</li> </ul>	
	<ul> <li>Txu (&lt;10% canopy cover of urban land) vegetation (VIS_ID 2223) is excluded from the update and this layer;</li> </ul>	
	<ul> <li>Areas of significant regrowth were added;</li> </ul>	
	<ul> <li>New regrowth polygons, and polygons originally classified as 'unclassified' in VIS_ID 2221 and 2222, were allocated PCTs based on existing vegetation mapping available in the localities being assessed.</li> </ul>

Lineuge	eage Original mapping captured as part of VIS_IDs 2221, 2222 and 3785 was updated using on screen digitising at approximately 1:15,000 scale. High resolution aerial photos, captured in 2011/12 were used to update the mapping. Areas of obvious clearing were removed, with large patches of regrowth added to the data layer.		

Limitations on public access					
Scope	dataset				
DQ Completeness Commission					
Explanation	Explanation complete				
DQ Completeness Omission					
Explanation	complete				
DQ Topological Consistency					
Explanation	All polygons are closed and dangles have been eliminated. Topologically correct.				
DQ Absolute External Positional Accuracy					
Explanation	5-20m				
DQ Non Quantita	tive Attribu	te Correctness			
Explanation	Attributes were generally maintained from orginal VIS_IDs 2221, 2222 and 3785. Where polygons were 'unclassified' in original mapping (i.e. VIS_IDs 2221, 2222 and 3785), or where new regrowth polygons were mapped, Plant Community Types (PCTs) were assigned. A new field was added to capture this PCT information.
