<b>Purpose</b>	(1) The aims of this Policy are:(a) to require development consent for cattle feedlots having a capacity to accommodate 50 or more head of cattle, and piggeries having a capacity to accommodate 200 or more pigs or 20 or more breeding sows, and (b) to provide for public participation in the consideration of development applications for cattle feedlots or piggeries of this size, and (c) to require that, in determining a development application for cattle feedlots or piggeries of this size, the consent authority is to take into consideration:(i) the adequacy of information provided, and (ii)

the potential for odour, water pollution and soil degradation, and (iii) measures to mitigate potential adverse impacts, and (iv) measures for the health and welfare of animals, and (v) relevant guidelines,so as to achieve greater consistency in environmental planning and assessment for cattle feedlots and piggeries.(2) This Policy also aims to extend the definition of the term rural industry where used in environmental planning instruments so as to include within the meaning of that term composting facilities and works, including facilities and works for the production of mushroom substrate.

**Status** Completed

### Spatial representation

**Type** vector

**Geometric Object Type** surface

### Spatial reference system

**Code identifying the spatial reference system** 4283

**Equivalent scale** 1:None

## Lineage

This spatial dataset reflects the current planning legislation in NSW in particular the maps and legislation published on the NSW legislation website ([www.legislation.nsw.gov.au](http://www.legislation.nsw.gov.au)). The data production usually occurs in conjunction with the development of the Environmental Planning Instrument (EPI) it is connected to. Original data inputs are produced by Local Government or the Department according to map and data standards developed by the Department and published externally via the website. These data inputs are checked by data and cartographic staff as well as planning staff internally against the map and data standards as well as for accurate content. Once the planning instrument is notified, the input data will be incorporated into the relevant EPI datasets. The quality management processes involved in the data production to this point are routinely screened by internal and external auditors for certification under ISO 9001 - Quality Management Systems. At this point the various datasets are then combined into a new normalised data schema to suit the requirements of the online Planning Viewer. This occurs via various automated ETL processes. Although every care is taken in ETL processes to maintain accuracy sometimes differences between inputs and final normalised data can occur.
