Scope dataset

DQ Completeness Commission

Effective date

2009-10-01

Explanation The dataset is complete for the mapped area.

DQ Completeness Omission

Effective date

2009-10-01

DQ Conceptual Consistency

Explanation The GIS package (ArcInfo) was used to do topological consistency check to detect flaws

in the spatial data structure and to flag them as errors. This check insures that all classified polygons are closed, nodes are formed at the intersection of lines and that

there is only one label within each polygon.

DQ Topological Consistency

Explanation Checked for missing attributes All attributes were checked

DQ Absolute External Positional Accuracy

Explanation 1m to 10m Determination: Deductive estimate. Ad-hoc comparisons with 1:25,000 layer

data and various sorts of imagery indicated good correlation in terms of shape and size

but with errors of the order indicated above in terms of position

DQ Non Quantitative Attribute Correctness

Explanation Attributes of the dataset include vegetation community, structure and disturbance.

Vegetation community is determined by aerial photograph interpretation and statistical analysis of quantitative plots with post mapping fieldwork to check communities,

accuracy for each of the attributes is estimated to be high.
