

Title	Timbarra National Park Vegetation 2011 VIS_ID 4756
Alternative title(s)	TimbarraNP_2011_E_4756
Abstract	<p>Timbarra National Park vegetation mapping was undertaken by Dr John T. Hunter in 2011 by contract for the NPWS Northern Tableland Region. Timbarra National Park is located 28km east of Tenterfield, adjacent to Demon Nature Reserve.</p> <p>The vegetation of the Timbarra National Park is described and mapped (scale 1:25 000). Eight communities are defined based on classification (Kulczynski association). These eight communities were mapped based on ground truthing, air photo interpretation and landform. Aims included the collation of existing information from previous floristic surveys and that the survey of 40, 20 x 20 m stratified full vascular plant floristic sites is carried out in order to complete a comprehensive investigation of the vegetation and flora of Timbarra National Park. This report represents the findings of this study. The collated information is to be used as a guide for management purposes.</p> <p>VIS_ID 4756</p>

Lineage

The requirements of the investigation were: 1. Collate existing information from previous vegetation surveys conducted within the conservation areas. 2. Site placement to be based on selected environmental variables and be distributed based on the area they occupy. 3. Identify weed species and their occurrence. 4. Identify RoTAP, EPB&C Act and TSC Act species and their occurrence. 5. Identify regionally significant species. 6. Provide known fire ecology information on species and communities. 7. Construction of a vegetation map based on communities as defined by classification4 and ordination analyses. 8. Provide management recommendations.
