

<b>Title</b>	Vegetation of Gamilaroi Nature Reserves, 2006. VIS_ID 4023
<b>Alternative title(s)</b>	GamilaroiNR_2006_E_4023
<b>Abstract</b>	The vegetation of Gamilaroi Nature Reserves is described and mapped (scale 1:50 000). This reserve is park of the NSW National Park and Wildlife Service estate. Four communities are defined based on classification (Kulczynski association). These four communities were mapped based on ground truthing, air photo interpretation and landform. Almost all of the reserve is dominated by the Eucalyptus pilligaensis (Pilliga Box), Cadellia pentastylis (Ooline) assemblages. Much of the reserve has been disturbed in the past, particularly by clearing and grazing. Two of the four communities are listed as endangered ecological communities and a third community would be included within the same endangered determination in many instances. Most communities are of generally of a woodland structure though much closed scrub occurs. A total of 176 vascular plant taxa were found from 58 families and 130 genera. VIS_ID 4023

## Lineage

Linework depicting an observed or inferred vegetation type boundary was marked on aerial photograph acetate overlays during stereoscopic interpretation of colour aerial photography at 1:50,000 scale. Each mapped polygon was assigned to a pre-determined vegetation type (see abstract for vegetation classification details), which was marked on the overlay. Linework was transferred to hardcopy topographic mapsheets, scanned and the images georectified in ArcView 3.3 GIS to give a spatial reference. Then the scanned image was used as a backdrop to digitise linework on-screen. The digital lines were converted to polygons and the shapefile cleaned to remove gaps, overlaps and wayward nodes. A code denoting the vegetation community was then attributed to each polygon based on the hardcopy linework.
