Title	Vegetation of the Western Blue Mountains including the Capertee, Coxs and Jenolan-Gurnang Areas (DEC, 2006) VIS_ID 2231	
Alternative title(s)	west_bluemts_IS_VISmap_2231	
Abstract	This layer contains digital vegetation mapping of the vegetation communities of the western Blue Mountains, NSW, specifically in the Capertee Valley, Coxs Valley-Newnes Plateau and Jenolan-Gurnang areas. Derived from Aerial Photographic Interpretation with communities defined using survey and statistical analysis The layer includes the boundaries of vegetation communities and lists attributes including vegetation community, structure and disturbance as described in the report: DEC (2006) The Vegetation of the Western Blue Mountains. Unpublished report funded by the Hawkesbury andndash; Nepean Catchment Management Authority. Department of Environment and Conservation, Hurstville.

Scope dataset

DQ Completeness Commission

Effective date

2009-01-10

Explanation

The dataset is complete for the mapped area. 1 hectare minimum polygon size, polygons were interpreted to less than one hectare at the interpreters discretion (ie. for special features, eg. Rainforest).

DQ Completeness Omission

Effective date

2009-01-10

DQ Conceptual Consistency

Explanation

The GIS package (ArcInfo) was used to do topological consistency check to detect flaws in the spatial data structure and to flag them as errors. This check insures that all classified polygons are closed, nodes are formed at the intersection of lines and that there is only one label within each polygon.

DQ Topological Consistency

Explanation Checked for missing attributes All attributes were checked

DQ Absolute External Positional Accuracy

Explanation

Precision: 10m to 100m Determination: Deductive estimate. Ad-hoc comparisons with 1:25,000 layer data and various sorts of imagery indicated good correlation in terms of shape and size but with errors of the order indicated above in terms of position.

DQ Non Quantitative Attribute Correctness

Explanation

Attributes of the dataset include vegetation community, structure and disturbance. Vegetation community is determined by aerial photograph interpretation and statistical analysis of quantitative plots with post mapping fieldwork to check communities, accuracy for each of the attributes is estimated to be high.
