

Title	Vegetation Survey of Mt Kaputar National Park VIS_ID 932
Alternative title(s)	Mt_Kaputar_Sth_VISmap_932
Abstract	"Vegetation map digitised from Porteners, M.F. (1998). Vegetation Survey of Mt Kaputar National Park (Southern Portion). Report for the NSW National Parks and Wildlife Service. NSW NPWS, Sydney.; ; The composition and extent of the present vegetation in the southern portion of Mt Kaputar National Park is described and mapped at 1:25 000 scale from intensive quadrat samples, field traverses and aerial photograph interpretation. Six vegetation communities are described and 246 species (251 taxa) of vascular plants recorded from 72 families, several of which are at their north-western geographical limit or regionally restricted. A very small proportion of species (5%) is exotic. Two nationally listed rare or threatened species are recorded from the study area, both of which occur infrequently in restricted habitats."; ; VIS_ID 932

Lineage	Colour aerial photographs at 1:20 000 scale (taken in April 1992) formed the basis of the vegetation map polygons. The images were interpreted stereoscopically for patterns of vegetation and geomorphology, and matched; to the vegetation site data. A provisional vegetation map was drafted and the linework and boundaries checked during ground-truthing. The study area was traversed and particular sites investigated to confirm polygons labels and resolve vegetation boundaries. The final vegetation polygons were then transferred and corrected to the 1:25 000 topographic map sheet and coded, ready for digitising into a geographic information system.
