Title	Water Modelling-Modelled Data
Alternative title(s)	Surface water modelling
Abstract	Time series of modelled daily flow rates in megalitres per day across the NSW river systems. Individual data sets are for each available river gauge data sets are attained via best available at the time of publishing hydrologic model/s and over the historic climate period (usually from early to mid-1890s to a water year previous to the date of publishing). Specific scenario data sets are expected to be updated annually and subject to quality requirements may be used in relevant studies.
	The naming structure of the individual files is "Gauge number_watercourse@Gauge name".
	QA procedure as described in the "Quality control for the modelled streamflow data.pdf" has been applied to each dataset.

Quality control of	Name: Quality control of streamflow data FINAL
streamflow data	Protocol: WWW:DOWNLOAD-1.0-httpdownload
<u>FINAL</u>	Description:
	This document outlines quality control processes for Streamflow data.
	Our quality control process consists of high-level checks to confirm that: • each streamflow time series has been assigned to the correct gauge • there are no major anomalies in the modelled data that suggest otherwise.
	The quality control process described here does not verify whether model calibration for rainfall-runoff model and river system models used to generate streamflow at selected locations is accurate. We assess calibration accuracy at various stages of model development via other processes.
