Title	Water Modelling-Palaeo Stochastic Climate Data-Greater Sydney-Silo Station (ix of xi) ID 069001-070000
Abstract	The palaeo stochastic climate data include 10,000 replicates of 130-yr daily data sets of rainfall and potential evapotranspiration generated using observed data sets without and with combined palaeo climate data. This work has been undertaken by researchers at the University of Newcastle and used in modelling for Greater Sydney Water Strategy.
	This particular Asset (069001-070000) houses Silo Station IDs:
	<ul> <li>069006 - BETTOWYND (CONDRY)</li> <li>069010 - BRAIDWOOD (WALLACE STREET)</li> <li>069016 - MILTON (SARAH CLAYDON VILLAGE)</li> <li>069041 - CHARLEYONG</li> <li>069049 - NERRIGA COMPOSITE</li> <li>069062 - SNOWBALL</li> <li>069132 - BRAIDWOOD RACECOURSE</li> </ul>
	Note: If you would like to ask a question, make any suggestions, or tell us how you are using this dataset, please visit the <u>NSW Water Hub which has</u> an online forum you can join.

Lineage The stochastic data are 10,000-year daily data sets at different climate stations, which were generated using observed or derived data sets combined with palaeo-logical climate data information. This work was undertaken by researchers at University of Adelaide and University of Newcastle and used in Regional Water Strategies. The stochastic data were generated region by region with spatial and temporal consistency of the data between regions maintained. Stochastic datasets were generated using the observed climate data and paleo-climatic information. The observed and derived data is downloaded from the SILO data-base of Australian climate data (https://www.longpaddock.qld.gov.au/silo/), which has climate data from 1889-present.
