

Title	Watsons Creek National Park vegetation map, 2017. VIS_ID 4694
Alternative title(s)	WatsonsCk_NP_2017_E_4694
Abstract	<p>In 2017, the Northern Tablelands office of the NSW Office of Environment and Heritage (OEH) commissioned Eco Logical Australia (ELA) to conduct a comprehensive vegetation survey of the National Park.</p> <p>Vegetation across the study area was mapped using high resolution ADS40 aerial imagery via a 2D computer screen interface. A total of 66 polygons were captured collectively representing seven vegetation communities. Five of these communities were reasonable matches for existing Plant Community Types (PCTs) as described by OEH, while two other "communities" were small areas of derived grassland and rocky heath for which there are currently no suitable PCT matches. VIS_ID 4694</p> <p>see related dataset VIS_ID 4695</p>

Lineage

A review of the literature and relevant databases found that there were already 13 existing vegetation sites in the study area. New fieldwork conducted for the current survey in June 2017 provided two additional 20 x 20 m full floristic sites and 18 rapid vegetation assessment sites. Vegetation across the study area was mapped using high resolution ADS40 aerial imagery via a 2D computer screen interface.
